

MINI PROJECT

1. Project Overview

This project analysis hospital data using Excel and Power BI to find out details about various diseases and its medications in people of various age groups with the help of Doctors specialised in each branch of medical science.

2. Tools used

- Microsoft Excel
- Power BI

3. Dataset

- Source: Collected dataset from google
- Data contains: Name, Age, Gender, Blood type, Medical condition, Date of admission, Doctor, Hospital insurance, Bill amount, Room number, Admission, Discharge date, Medication, Test results.

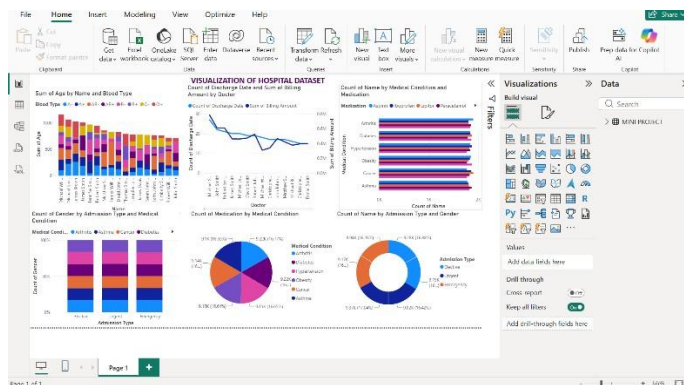

4. Steps followed

- Cleaned dataset using excel (Preprocessing of data)
- Imported cleaned data into Power BI
- Built dashboards using various types of charts (Visualization of dataset)

5. Key Insights

1. Patients admission was more in urgent unit than in emergency unit and elective unit.
2. Paracetamol is the high demandable medicine.
3. Obesity , Asthma, Arthritis, Diabetes, Hypertension, Cancer are so far analysed medical conditions.

6. Screen short

7. Files included

- 'MINI PROJECT.csv'- Cleaned dataset
- 'Visualization Mini Project'- Power BI Dashboard
- 'README.md'- Project description

8. How to use

- Open 'MINI PROJECT.csv' to view the Cleaned dataset
- Open 'Visualization Mini Project ' to explore the visuals
